

# A CLEAN, VERSATILE AND DEPENDABLE FUEL SOURCE IS AT YOUR SERVICE...

In the November election Norwich residents approved a \$3.0 million bond issue for the expansion of the Norwich Public Utilities' natural gas pipeline. Revenues from the newly expanded services will be used to pay the bond. We are now finalizing the plan to utilize these funds in the most efficient manner possible.

We are very aware that the citizens of Norwich have placed an enormous amount of trust in us by passing this bond issue. Our goal is to justify that trust by being good stewards of the people's money.

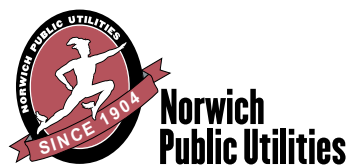

Initially, we have to determine where it makes the most economic sense to expand service in Norwich. It is very important that we ensure there is sufficient demand for natural gas service before we extend a pipeline into a neighborhood.

## SO WHY CHOOSE NATURAL GAS?

*Click to continue*

THERE ARE MANY BENEFITS TO CHOOSING NATURAL GAS FOR YOUR HOME'S FUEL SOURCE. IT'S CLEAN & EFFICIENT, IT'S VERSATILE, AND IT'S ALWAYS AVAILABLE.

## CLEAN & EFFICIENT

Natural gas is one of the cleanest fuel sources in use today. When burned, natural gas produces less greenhouse gases and other hazardous by-products than oil or coal. It produces virtually no solid waste residue, which provides you the added benefit of less costly maintenance and repairs on your heating appliances. And, natural gas appliances are more energy efficient than other fuel sources. For more information about natural gas efficiency, including links to NPU's gas efficiency rebate information, click [here](#).

## VERSATILE

Natural gas can do more than heat your home. It can be used to heat your water, dry your clothes, cook your food, and light your fireplace. Once it's piped to your home, it's easy to convert appliances or add new natural gas appliances.

## DEPENDABLE

Natural gas is always available, so you never have to worry about running out of heating fuel. It's piped right to your home, when you need it -- as you need it. There's no storage tanks taking up room in your yard or basement.

Natural gas is a domestic fuel. 99% of natural gas comes from North America. By using natural gas, America's dependence on foreign oil is reduced.

Natural gas is safe. NPU -- and the gas industry -- have a solid safety record when it comes to maintaining the 120-mile natural gas distribution system in Norwich. Our safety and training programs are overseen by state and federal officials. Nationwide, there is virtually no difference in the safety record of natural gas compared to other home fuel sources, including propane gas, electricity, and fuel oil.

DON'T BE LEFT OUT IN THE COLD!  
CONSIDER SWITCHING TO NATURAL GAS FOR YOUR HOME'S FUEL SOURCE.
